

Wenco BenchManager Dozer

Create benches and roads that perfectly match your designs

BenchManager Dozer adds GNSS-powered accuracy to all your track and wheel dozers. This greater precision empowers your operators to create benches, roads, and other physical features exactly in line with design.

Simply load files onto each dozer and follow the onscreen guidelines. Centimetre-level accuracy keeps every cut and fill on target.

BenchManager Dozer ensures your mine matches your designs — even without time-consuming surveys or grade staking. The system loads files directly from your mine planning software, so it knows the coordinates needed for your next road, bench, or ramp. High-precision GNSS then guides your equipment along the path to create perfect contours every time.

BenchManager Dozer records all your volumes, push distances, cycles, rehandle, and other essential dozing metrics.

This data integrates seamlessly into the rest of the Wenco Mine Performance Suite for design reporting, planning, and analytics on a whole new level.

- Smooth Roads for smooth hauling
- Goodbye, surveying
- Precision data; precision planning

Keep all your dozing on target with high-precision machine guidance.

Reshape roads. Build ramps. Contour benches. All without surveying.

Add Wenco AGS (Arm Geometry System) to gain even more precision on hydraulic shovels.
