

Wenco Maintenance Monitor

Spend less time in the shop and more time in the pit

Maintenance Monitor provides a detailed view of all your equipment in a down status. Working with the Wencomine fleet management system, Maintenance Monitor scans your operation for any equipment events that arise.

When it detects an issue, our software records the details and displays them for office personnel. As your crew works on the problem, Maintenance Monitor keeps you updated on progress. The application tracks the entire duration of downtime, accounting for every minute. Search and filter functions let you sort units by health status, maintenance history, work orders, and more.

With Maintenance Monitor, see every machine status, maintenance action, and cause of downtime. Follow how much time and labour goes into every repair. Understand the reasons behind each down and make adjustments to correct them. Our software helps you forecast the care your fleet will need in the future, so you can plan accordingly.

Monitor all activities on equipment in a down status.

Understand the most common reasons for equipment downtime.

Integrate with Hitachi, Liebherr, Caterpillar, Komatsu, Detroit Diesel, and other OEM systems.
