

Wencomine ReadyLine

Asset Health Management and Predictive Maintenance

- Real-time Data
- Machine Health
- Extend Equipment Life & Utilization

ReadyLine strips away the guesswork of your machine maintenance so your mine runs as it should — according to plan.

Our asset health management system gives you advanced understanding of your fleet's condition so you can stop problems before they start.

The system draws data from your equipment's OEM sensors to show you the full picture of each monitored component.

Watch your equipment's condition in real time as details stream over your wireless network. Spot trends in asset health by viewing historical data. Measure any movement or action tracked by an OEM sensor.

Our design ensures you can track your fleet's most important parameters without tying up your IT infrastructure.

Managing asset health helps rid your mine of unwelcome and costly surprises. With ReadyLine, you can prevent minor issues from becoming major failures.

Monitor the health of any component equipped with an OEM sensor.

Work as a standalone tool or integrate with the Wencomine fleet management system.

Lower the cost of mine operations by maximizing equipment uptime.

Wencomine Mine Performance Suite

Fleet Management	Machine Guidance	Safety	Business Intelligence	Maintenance	Assets
